The publication of Warren Colburn s **First Lessons**, in 1826, marked the beginning of an era of progress in the art of teaching. The use of that book turned the attention of teachers to two facts, viz: 1st. That for every arithmetical process there is a reason; and 2d. That it is quite as important that pupils learn the why as the how. The general principle that reformers go to extremes, found no exception in the ease of the introduction of the study of Mental Arithmetic into our schools. The chief aim of some teachers of this subject seems to have been, to see how much a child could be made to say, in solving a problem, rather than to cultivate his power to combine numbers, and his ability to explain processes and state reasons clearly, concisely, and understanding.
